WORKFLOWS

Workspace: A dynamic, agile workspace, and alarm monitoring & management solution, that works with Niagara N4 & Niagara. Analytics to deliver powerful visualisation and essential insights into Building Management System Data. View your entire facility through a versatile workspace and a wide selection of widgets that provide valuable insights, and effortlessly manage and monitor alarms with the advanced alarm console.

Reporting: Smart reporting capabilities for Niagara that enable effortless report creation & modification, with the ease of automated mailing and saving. It also provides varying levels of access for generating customized reports for different user groups. This powerful solution covers all aspects of your BMS and is fully compliant with FDA regulations on electronic records and ERES (21 CFR).

Analytics: Complex data analytics based on your facility's Niagara data can be done with ease now. It includes fault detection, energy consumption, powerful benchmarking, spike & hunting analytic widgets & more.

Genie: The world's first NLP-powered search-based BI tool for BMS. It provides immediate responses to questions for automation systems. Genie acquires BI from BMS systems swiftly and with ease, empowering the users of the BMS.

Gyan: A powerful AI/ML-powered platform that forecasts and controls energy usage. It predicts setpoints, optimizes energy forecasts, and dynamically adjusts setpoints in real time. Seamlessly integrated with Niagara, Gyan enhances efficiency, ensuring maximum savings and comfort with automated, data-driven energy management

SignFlo: A complete report e-signing & workflow solution that facilitates the e-signing and review of reports by authorized individuals based on user requirements. Designed to work natively with Niagara, SignFlo has a highly intuitive interface that lets users perform advanced operations like viewing, assigning, signing & managing reports.

FDD: FDD (Fault Detection and Diagnostics) empowers facility managers to proactively maintain their Building Management Systems. It swiftly detects faults, provides clear diagnostics, and guides remediation, minimizing disruptions and enhancing operational efficiency. By leveraging complex yet easily configurable rules, FDD ensures that your facility remains in optimal condition with real-time monitoring and actionable alerts.

Workflows: Workflows streamlines facility operations by enabling the creation and management of custom workflows tailored to various departments and roles. With user-friendly forms, automated data updates, and an approval mechanism, it ensures data accuracy and operational efficiency. Seamlessly integrated with the Niagara system, it also provides built-in notifications and comprehensive reporting for transparent and efficient workflow management.

Commissioning Apps: Commissioning is now 10x faster. It is now possible to perform bulk tagging of Niagara points quickly and easily using a simple CSV list. You can seamlessly create Niagara reports based on your custom Excel templates through the Import/Export feature and easily generate complex Excel reports based on Niagara data.

Asset Manager: A complete Asset Management ecosystem that provides realtime Equipment Performance Diagnosis for Higher Asset Uptimes, ensuring compliance & integrity. With modules such as Service Desk, Planned Maintenance, Asset Vault, and Inventory Manager, the service, preventive maintenance, storage of asset collaterals & asset related inventory are all taken care of with a single solution.

O-Connect: Receive instant notifications for any alarm from Niagara through a variety of channels including call, SMS, WhatsApp, and app notification, anywhere, anytime.

Tenant Billing: A fully automated tenant billing solution that lets the users manage, schedule, & email tenant bills. A highly intuitive interface, customizable invoices, and immense functionality, it offers a seamless experience to both the user & the tenant.
